

Position Details

School / Department:

School of Medicine / Pathology

Classification:

Postdoctoral Associate

Funding source:

Federal Grants

Start Date:

ASAP

Description:

A post-doctoral position is available at the McGowan Institute for Regenerative Medicine, University of Pittsburgh, on projects related to stem cell transplantation, tissue repair and ectopic organogenesis. We are seeking a candidate who is highly self-motivated and has strong background in cell and molecular biology as well as immunology and hematopoiesis. The successful candidate is expected to independently conduct experiments that include, but are not limited to cell cultures, multicolor flow cytometry studies, Immunostaining, ELISA assays, Real-time PCR and cell transplantation in different mouse models.

Excellent verbal and written communication skills are required. Interested candidates are encouraged to send their application including curriculum vitae and contact information of at least three references to:

Eric Lagasse, PhD, at lagasse@pitt.edu

Qualifications:

Applicant should have a PhD, MD/PhD, or MD degree.
